PROFESSIONAL SUMMARY

Software QA Engineer with 3+ years of experience at the Cognizant in insurance domain. Experienced in manual testing, API testing, and test automation using Selenium WebDriver, Java, TestNG, SOAP UI, and SQL. Executed end-to-end validation of insurance policy lifecycle modules, vendor integration APIs, and authentication systems. Supported multiple production releases through functional testing, regression testing, and defect lifecycle management in Agile environments.

SKILLS

Automation: Selenium WebDriver, TestNG, Maven, Page Object Model (POM), Data-Driven Testing, Extent Reports.
Testing: Functional Testing, Regression Testing, API Testing, Integration Testing, User Acceptance Testing, Smoke Testing.
Programming: Java, SQL, Python (Basic)
Tools: HP ALM, LeanKit, SOAP UI, Eclipse, VS Code.
Testing Process: STLC, Agile.
QA Practices: Test Case Design, Defect Management, Test Execution.

WORK HISTORY

Cognizant Technology Solutions | Hyderabad, India
Programmer Analyst | Sep 2023 – Present
Project: The Hanover Insurance Group

- Executed manual, regression, and API testing across enterprise insurance platforms, validating policy lifecycle workflows and multi-vendor API integrations.
- Designed and executed functional, integration, and UAT test cases across multiple releases in an Agile development environment.
- Validated backend data using SQL queries to ensure consistency between UI Transactions, API responses, and database records.
- Managed defect lifecycle using HP ALM, including defect logging, tracking, and coordination with development teams for resolution.
- Communicated testing status, defect metrics, and release readiness with client stakeholders during testing cycles.

Key Projects:

Identity Access Management Testing — MFA Implementation (Agent Portal)

- Led QA activities as the sole tester for the MFA rollout across Hanover agent login systems, defining test strategy, managing defect tracking, and communicating testing status directly with Hanover stakeholders.
- Designed and executed 500+ test cases covering authentication workflows, negative scenarios (invalid/expired OTP), and session timeout validation.

- Developed Selenium-based regression automation using TestNG, Page Object Model (POM), Maven, and Extent Reports; integrated Power Automate to retrieve OTPs from email for automated MFA validation.
- Identified and logged 100+ defects during testing cycles and reduced the regression execution time during monthly outage validation cycles by ~70%.

Insurance API Integration Testing — Vendor Quotability Services

- Performed SOAP API testing for insurance quotability integrations by replicating vendor requests using SOAP UI and validating XML request and response payloads.
- Developed API test cases and regression suites in SOAP UI to validate vendor data mapping, response handling, and error scenarios.
- Validated API request and response payload values against backend database tables using SQL.
- Supported 6–8 production releases and identified 5–10 API defects per release prior to deployment.

Application Modernization Testing — Lynx (VBScript → Java)

- Executed functional testing of a full application rewrite from legacy VBScript to a Java-based platform, testing 10+ complex UI screens used for producer licensing and agency management.
- Designed and executed 1000+ functional test cases to verify feature parity between legacy and modernized applications.
- Developed a Selenium-based regression automation framework using TestNG, Page Object Model (POM), Maven, and Extent Reports to support repeatable regression validation.
- Identified 300+ defects during the testing cycle, including over 250 confirmed defects prior to deployment.

WCA Policy Center Testing — Workers Compensation LOB

- Executed functional and integration testing for Workers Compensation (WCA) policy management platform supporting policy issuance, coverage configurations, policy transactions, and validation of premium calculation and rating logic.
- Designed and executed 5000+ test cases across 15+ Agile sprints to validate new LOB functionality within the enterprise policy management portal.
- Coordinated test execution activities within a QA team of 7 members, occasionally leading sprint testing activities in the absence of the test lead.
- Identified and logged 500+ defects during integration testing using HP ALM, enabling resolution before promotion to UAT environments.

EDUCATION

Bachelor of Technology (**B.Tech**), Electronics and Computer Engineering (**ECE**)
Bharath Institute of Science and Technology | Chennai, Tamil Nadu | **CGPA**: 8.9/10

ACCOMPLISHMENTS

- Received the **Cognizant Cheers Award** for contributions to functional testing, test planning, and QA coordination on the Hanover Insurance platform.
- Recognized by client stakeholders for maintaining high testing quality and delivering test cycles on schedule across multiple releases.
- Developed a Selenium-based regression automation framework that reduced regression execution time by approximately **70%** during outage validation cycles.
